RE: Stack test schedule for AQD #80

Dear Carl:

Per our conversation of February 13th, and again today, we are scheduled to stack test the "D" train Calciner #4 (AQD #80) on February 27th and 28th.

Enclosed you will find Protocol No. 1457-A, prepared by Airtech Environmental Services. Applicable Reference Methods will be conducted, without deviation, as detailed in the Protocol. Particulate emissions will be determined utilizing Methods 5 and 202, summing the front half and back half inorganic emissions. Methods 7E, 10, and 25A will be utilized for NO_x, CO, and total hydrocarbons, respectively. Method 18 will be conducted to determine methane and ethane, which will be subtracted from the total hydrocarbons to determine VOC emissions.

If you have any questions concerning the testing, please contact me at (307) 872-6571.

Respectfully submitted,

Dolly A. Potter
Environmental Services Supervisor
